

Tilesheets

Last Modified on 01/24/2022 6:45 pm EST

Want to view or download all Gather objects, walls, floors, etc? Our in-house tileset is publicly available on Github. Anyone can download these tilesheets and anyone can submit their own custom tilesheets to be included on our repository by submitting pull requests. These tilesheets are designed to import straight into and be used with the map creation application called Tiled, but you can still use them if you are using any other photo editor.

To access the files:

1. Go to <https://github.com/gathertown/mapmaking>
2. Click the green [Code] button
3. Select **Download Zip** to get the zip file

Tip: For those of you who are already git-savvy, you'll find that you're allowed to clone/fork/contribute, etc.
