

Music

Last Modified on 12/08/2021 11:37 am EST

Right now we don't have a feature to directly stream music. It is definitely on our wish list. In the mean time, here are a few options:

- Use a separate computer and sign in as a "DJ" to pipe music into the room by playing the DJ's avatar on a [Spotlight tile](#).
- Use [screen share](#) on Chrome. If you want to isolate the audio that you're sharing to a specific tab in your browser (e.g., Spotify or a YouTube channel), select **Chrome Tab**, and choose the tab you wish to share, and select the **Share tab audio** checkbox.

Warning: Only Chrome allows you to share audio specifically. Using screen share to share audio does not work on Firefox or Safari.

- Insert an object and embed a video, using the [Synched TV option](#). You can broadcast a very long YouTube video, but guests will need to be within the object's [Activation Distance](#) to hear/see it.
- Use a third-party application like [OBS](#).
