

Firefox Issues

Last Modified on 11/15/2021 5:12 pm EST

In August 2021, Firefox was updated to use a new video rendering technology called WebRender.

WebRender may improve audio and video performance in Gather, but it may also cause instability and other issues like flickering, artifacting (graphic distortion), or even (in rare cases) a full system crash.

If you are experiencing these kinds of issues in Gather, please use [this support article from Mozilla](#) to troubleshoot.
